A: If you want to comment out the whole line, use `commented_out: true` instead of just `true` the entire line will be commented out, even though you have not added `#` at the beginning of the line To comment out the part of the line you have already got, use `# [text you want to comment out]` the text with `#` will be comment out

The consumption of fossil fuels by the United States and world in the past century increased markedly the amount of carbon dioxide in the Earth's atmosphere. This is because the combustion of fossil fuels resulted in increased atmospheric concentrations of carbon dioxide. The Kyoto Protocol was negotiated with the intention that it would reduce the concentration of atmospheric carbon dioxide to below 500 ppm by the year 2010. However, current estimates of future global oil supply make it clear that by 2010 the maximum concentration of atmospheric carbon dioxide that can be achieved with current methods of producing oil is not within this goal. In fact, the time for atmospheric carbon dioxide to reach the Kyoto goal of below 500 ppm is now rapidly passing. Government and the oil and gas industry alike are turning their attention to the possibility of achieving the concentration of atmospheric carbon dioxide to below 350 ppm by the year 2050. In order to achieve this global goal, new and improved technologies for the in situ conversion of fossil carbon into other useful products are urgently needed. Current methods of improving oil recovery may achieve a very small amount of energy from the fuel that is used, but cannot reduce the atmospheric concentration of carbon dioxide. Other methods have been devised that use carbon monoxide or hydrogen to catalytically convert carbon dioxide into gases that can be sold at the well site or the crude plant. One such method involves the use of iron to convert carbon monoxide to carbon dioxide and hydrogen in the presence of a metal oxide catalyst.

This invention meets the need for a low cost, new technology for the in situ conversion of fossil fuels into other products by providing a fluid-bed reactor for the catalytic conversion of carbon dioxide, carbon monoxide and hydrogen into graphite, methanol, formaldehyde and water.

Functional Roles of miRNAs in Alzheimer's Disease. Alzheimer's disease (AD) is a neurodegenerative disorder that affects multiple brain regions. Genetic and environmental factors contribute to the onset and progression of AD. Numerous studies have provided convincing evidence of the pathophysiology of AD, including the proteinopathies and the cellular mechanisms underlying amyloid beta peptide (A β) production 648931e174

However the movie is still deeply rooted in American culture. What's more, this trait allows the movie to tackle a number of societal issues. Taking on the difficult subject of gun control, the movie investigates the divisive topic of gun ownership. Another obvious theme is the way race plays a part in the lack of equality. Despite an interracial relationship, and the fact that one of the primary characters is white, this is definitely a film about non-whites. Sure, the movie does lighten the topic with humour, but the film really isn't a comedy.

Either way, the movie is sure to stir up a lot of debate, and obviously raise some questions. . The film deals with the subject of race, and possibly other non-conventional subject matter. This makes it an extremely difficult movie to watch. The American cineast has taken on some challenging subjects, including race. Yes, being about race means the movie will have a bitter taste.

At the time of writing, there are no official dates for the movie's release. However, the movie is set to be released this year, so it seems likely that we will soon see the release of the movie. I say this because The Equalizer has been on the screen since January 2013, but was only released in the USA in May 2014. . So hopefully we will not have to wait until April or May this year.

So, what are the best options if you want to watch this movie? Well, you should start by looking into the movie's release date, as this can vary a lot. If you look on the website for The Equalizer, you will be able to see how long people have been waiting for the release of the movie. This is because the

movie has been in production since at least July 2010, so there have already been a lot of days that have passed. There are also a lot of people who have seen the movie. This information can be found on a website called ThatsMyNe. The numbers on this site indicate the number of people who have seen the film, and their age group. So, all this information is available in the website, so don't worry about looking for it. . You don't have to look into using that website, however. The problem is that not all people use the Internet to find things out. So, if you are in this category, you will have to start looking for information. Whether this information is on a news website, an official website, or even something
